

iSense Android User Installation Guide

用手机扫描二维码安装

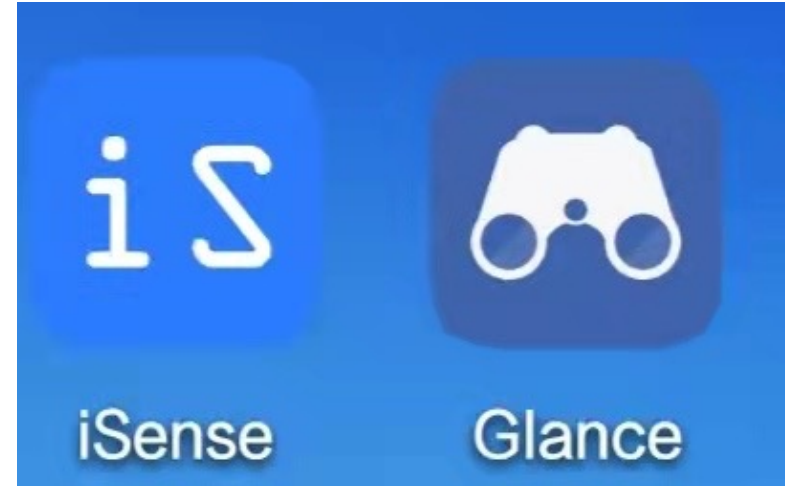

Scan the QR code with your mobile phone to install

Step 1

Android users download and install the app:

Android users, please download the app installation compressed package released in the WeChat group and install it on your phone after decompression. The iSense app icon after installation is shown in the figure.

Step 2

Join the project :

Please:

**Enter your Chinese name (such as Wang XX) as your user name;
and fill in your school ID (such as 0123XXXX, etc.),
and then click [Login] to enter the user.**

Login

Step 3

Login User :

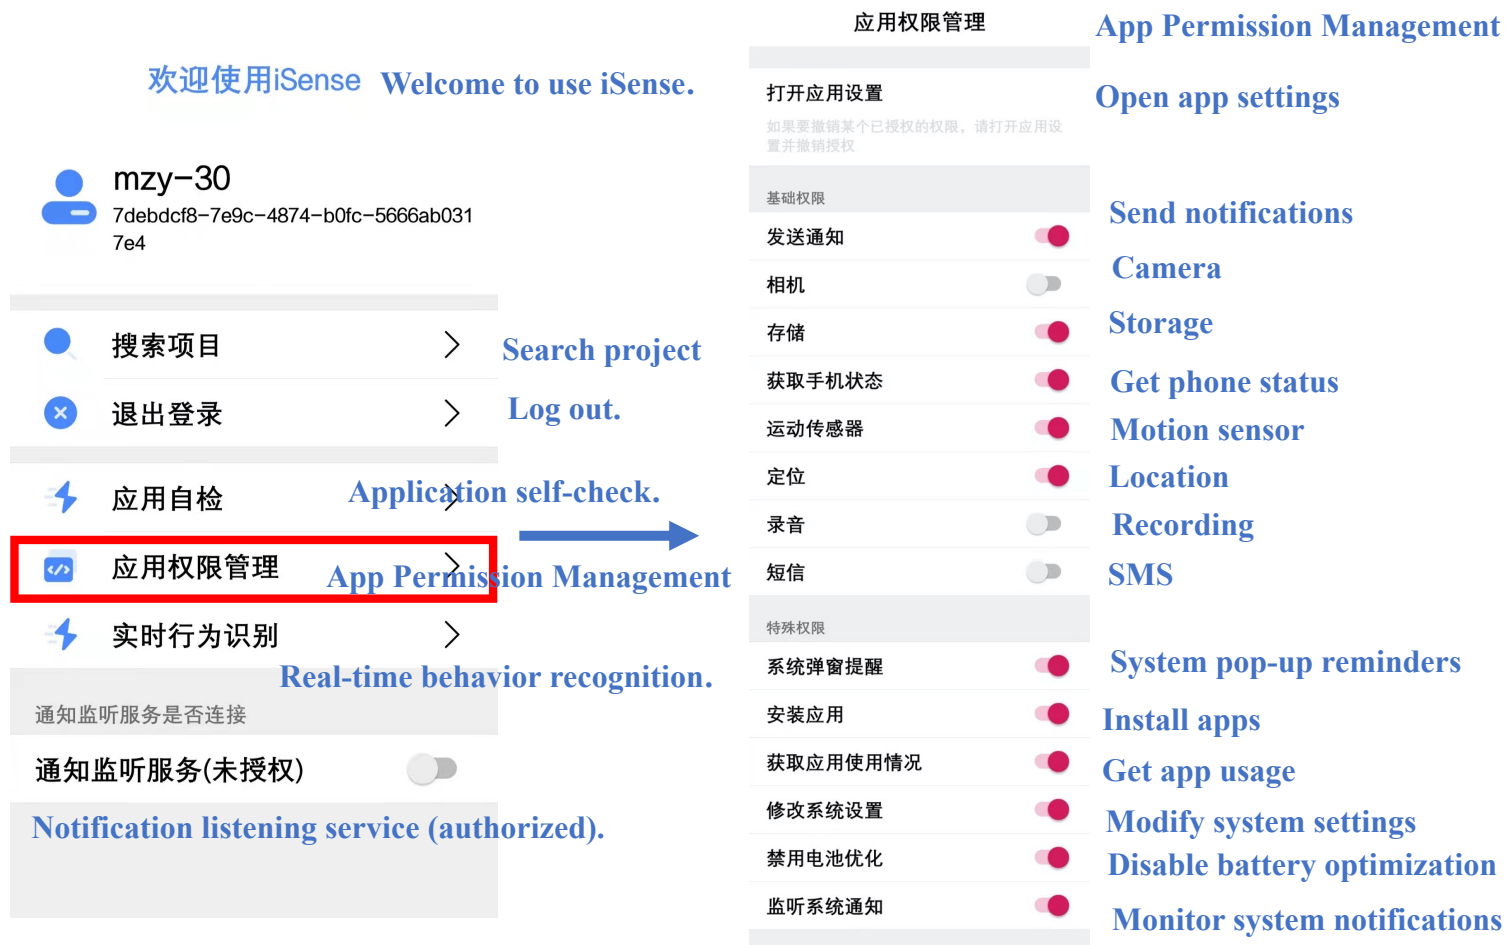

After logging in, confirm that the project name is "jlu" and click "Search Project", then click "Participate in the Project", and finally select "Confirm"

Step 4

After successfully logging in, please set permissions::

The page after the user successfully logs in is as shown on the right. Next, click "App Permission Management" and set it according to the rightmost picture.

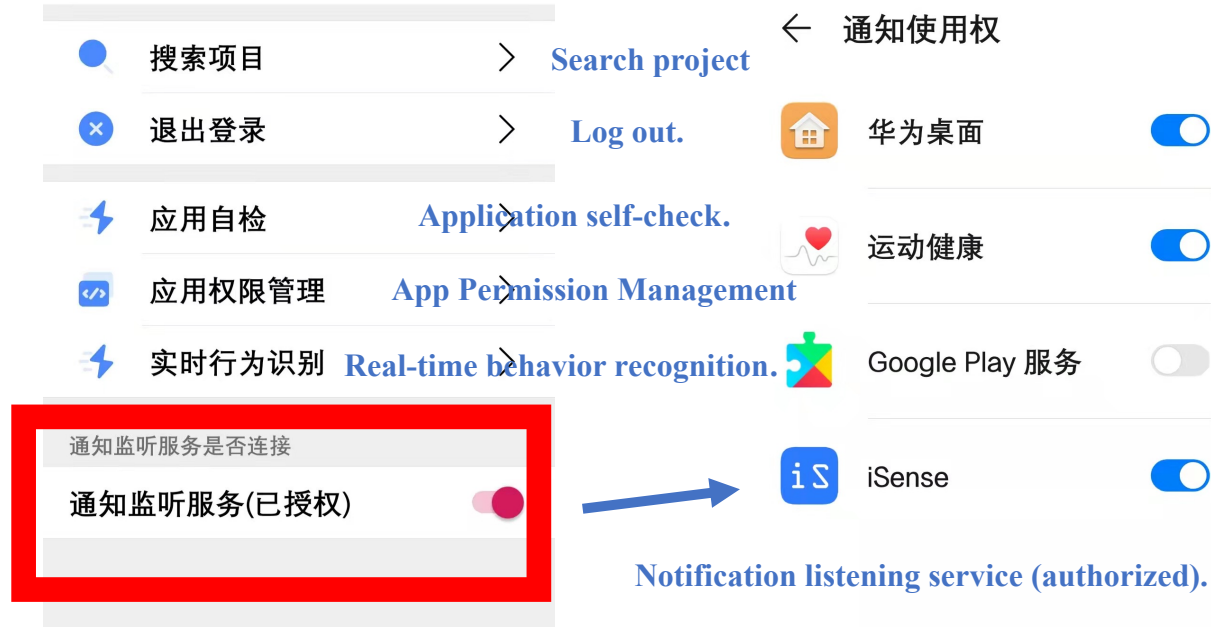

Step 5

Continue setting permissions:

After returning to the user interface, check and ensure that the service function in the red box on the right is turned on.

If it is not turned on, turn it on and follow the rightmost page to turn on the notification usage rights of isense.

Step 6

Complete the App internal settings:

After successfully completing the setup, the page will look like the one on the right.

Application self-check.

App Permission Management

Real-time behavior recognition.

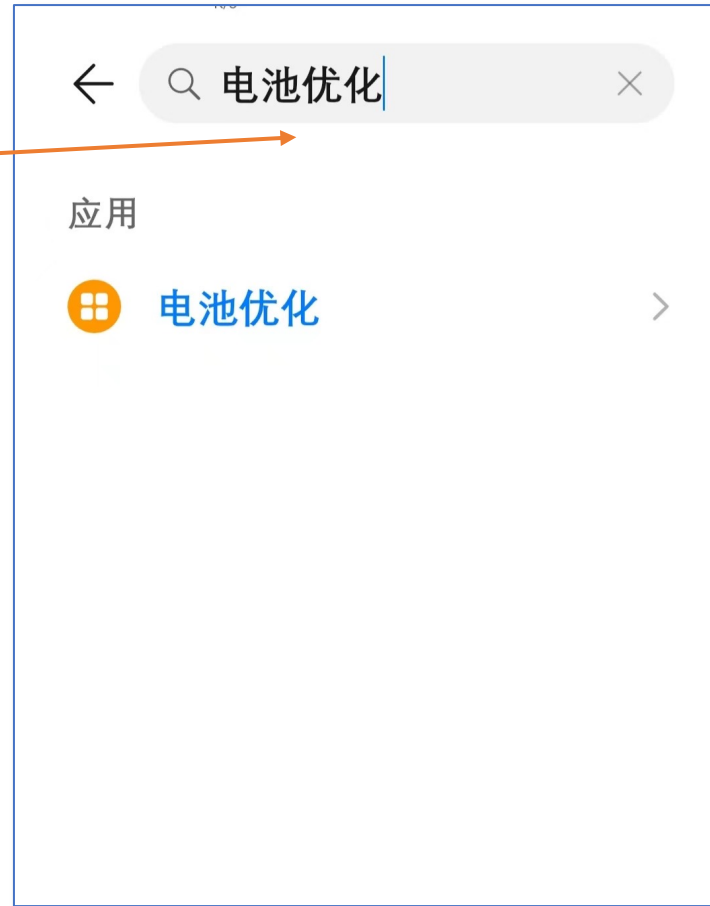

Notification listening service (authorized).

Step 7

Manually complete the phone system settings:

Please open the [Settings] in your phone as shown in the icon above, enter “Battery Optimization” in the search bar and click.

Battery Optimization

Step 8

Manually complete the phone system settings:

Please find the "iSense" icon in the "Don't Allow" list and click it.

After confirming that the option is "Do not allow", click [OK] to complete the setting.

Step 9

Manually complete the phone system settings:

If the iSense application icon is not found in the "Not Allowed" list, please click [All Apps], and after entering the [All Apps] list, type "iSense" in the search bar to find the app and proceed to step 8 to finally complete the steps of manually setting up the system.
